

Scorecard for Accountability and Action

In Cabo Verde, 58% of the population lives in areas where there is a low risk of malaria; the rest of the country is malaria-free. The annual reported number of malaria cases in 2014 was 46 with 2 deaths.

Metrics

Commodities Financed and Financial Control

IRS financing 2016 (% of at-risk population)	100
Public sector RDT financing 2016 projection (% of need)	90
Public sector ACT financing 2016 projection (% of need)	100
World Bank rating on public sector management and institutions 2015 (CPIA Cluster D)	4.0

Insecticide Resistance Monitoring, Implementation and Impact

Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	
Insecticide resistance monitored since 2014 and data reported to WHO	
National Insecticide Resistance Monitoring and Management Plan	
Scale of Implementation of iCCM (2013)	
IRS Operational Coverage (%)	95
>75% Decrease in Malaria Incidence Projected 2000–2015	

Tracer Indicators for Maternal and Child Health

Estimated % of Total Population living with HIV who have access to antiretroviral therapy (2015)	42
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2015)	47
% deliveries assisted by skilled birth attendant	99
Postnatal care (within 48 hrs)	
Exclusive breastfeeding (% children < 6 months)	
Vitamin A Coverage 2014 (2 doses)	
DPT3 coverage 2015 (vaccination among 0-11 month olds)	93

Malaria

Progress

Cabo Verde has made great progress and has achieved significant impact in its malaria control programme, enabling the country to enter the pre-elimination phase of malaria control. The country has secured sufficient resources to sustain universal coverage of key malaria interventions in 2016. In addition Cabo Verde has a high rating in terms of public sector management systems (CPIA cluster D). Cabo Verde was awarded the 2016 ALMA Award for Excellence for achieving the Millennium Development Goals (MDGs) target for malaria.

Impact

Malaria morbidity and mortality has declined in Cabo Verde. Total confirmed malaria cases decreased from 126 during 2000–2001 to 46 cases in 2014 and 2 deaths. As such, the country has achieved the MDG international target of at least a 75% reduction in malaria burden since 2000.

Key Challenge

- Sustaining malaria control gains as the country prepares for elimination.

Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Vector control	Report on the status of insecticide resistance monitoring to WHO and finalise and implement the national insecticide resistance monitoring and management plan	Q1 2017		Cabo Verde has confirmed that they have carried out susceptibility testing to pyrethroids and the mosquito population remains susceptible. The country is planning to develop a national plan for insecticide resistance monitoring and management

MNCH

Progress

The country has achieved high coverage of the tracer MNCH interventions, DPT3 vaccination and skilled birth attendants.

Previous Key Recommended Actions

Cabo Verde has responded positively to the MNCH recommended actions addressing lack of data on postnatal care, exclusive breastfeeding and vitamin A and continues to track progress as these actions are implemented.
