

### Scorecard for Accountability and Action

Malaria is present in the three northern provinces of South Africa bordering Mozambique and Eswatini. The annual reported number of malaria cases in 2022 was 7,280 with 29 deaths.

#### Metrics

Financing		
IRS financing (2024-2026) (% of at-risk population)	100	
Public sector ACTs and RTDs financing (2024-2026) projection (% of need)	100	
% of National Malaria Strategic Plan Financed (2024-2026)		
Policy		
Signed, ratified and deposited the AMA instrument at the AUC		
Malaria activities targeting refugees in Malaria Strategic Plan		
Malaria activities targeting IDPs in Malaria Strategic Plan		
Zero Malaria Starts With Me Launched		
End Malaria Council and Fund Launched		
Resistance Monitoring, Implementation and Impact		
Drug efficacy studies conducted since 2019 and data reported to WHO		
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	3	
Insecticide resistance monitored since 2015 and data reported to WHO		
RDTs in stock (>6 months stock)		
ACTs in stock (>6 months stock)		
LLIN/IRS campaign on track		
% of ITNs/IRS delivered in 2023 that include next generation insecticides	0	
On track to reduce case incidence by ≥55% by 2022 (vs 2015)		
On track to reduce case mortality by ≥55% by 2022 (vs 2015)		
Tracer Indicators for Maternal and Child Health, NTDs and Covid 19		
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2022)		
% of Neglected Tropical Disease MDAs Achieving WHO Targets		
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2022)	54	
Vitamin A Coverage 2022 (2 doses)	44	
DPT3 coverage 2022 (vaccination among 0-11 month olds)	85	

#### Key

Green	Target achieved or on track
Yellow	Progress but more effort required
Red	Not on track
Grey	No data
White	Not applicable

## **Malaria**

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. We must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. AU Member States face a \$1.5 billion gap just to sustain existing, yet inadequate, levels of malaria-related services between now and 2026. To get back on track and eliminate malaria, we will need to mobilise another \$5.2 billion dollars annually to fully finance our national malaria plans. Climate change presents a significant threat to the progress that we have made. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Climate disasters displace millions and destroy roads and health facilities, reducing access to health services. There is urgency to decarbonise and reduce our carbon footprint. We must implement integrated and multisectoral solutions, and adapt our health systems to the threats of both climate change and pandemics. We must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the *Anopheles stephensi* mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. The scaling up of these interventions will help us achieve our goal of eliminating malaria. This will require integrated approaches with malaria as a pathfinder for pandemic preparedness, climate change and health, Primary Health Care and Universal Health Coverage. We must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD councils and Funds, which have raised over US\$50 million.

## **Progress**

South Africa has sufficient financing to cover the malaria commodity needs for 2023-2026 and has good stocks of ACTs and RDTs. The country has finalised the insecticide resistance monitoring and management plan and has reported insecticide resistance data to WHO. WHO has identified South Africa as being a country with the potential to eliminate local transmission of malaria by 2025 and the country has reduced malaria incidence and deaths by more than 40% since 2015 and is on track to achieve the 2025 targets.

In line with the priority agenda of the ALMA chair, His Excellency President Umaro Sissoco Embaló, South Africa has enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Elimination Scorecard, although it is not yet shared on the ALMA Scorecard Hub.

## **Impact**

The annual reported number of malaria cases in 2022 was 7,280 with 29 deaths.

## **Key Challenges**

- Risk of re-introduction of malaria from neighbouring countries.
- There is a need to strengthen cross border collaboration with neighbouring countries.

## Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Policy	Sign, ratify and deposit the AMA instrument at the AUC	Q1 2023		No Progress Reported

The country has responded positively to the recommended actions addressing reporting drug resistance monitoring.

## Neglected Tropical Diseases

### Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in South Africa is shown using a composite index calculated from preventive chemotherapy coverage achieved for schistosomiasis and soil transmitted helminthiasis. In 2022, preventive chemotherapy coverage is 0 % for both soil transmitted helminths and for schistosomiasis. Overall, the NTD preventive chemotherapy coverage index for South Africa in 2022 is 0, which is the same compared with the 2021 index value (0). The country did not reach any WHO MDA target in 2022.

### New Key Recommended Action

Objective	Action Item	Suggested completion timeframe
NTDs	Work to implement preventive chemotherapy for soil transmitted helminths and schistosomiasis and reach WHO targets.	Q4 2024

### Key

	Action achieved
	Some progress
	No progress
	Deliverable not yet due
