Congo ALMA Quarterly Report Quarter Three, 2024

Scorecard for Accountability and Action

Metrics

Financing			
LLIN financing (2024-2026) projection (% of need)		100	
Public sector ACTs and RTDs financing (2024-2026) projection (% of need)		100	
% of National Malaria Strategic Plan Financed (2024- 2026)		61	
Policy			
Signed, ratified and deposited the AMA instrument at the AUC			
Malaria activities targeting refugees in Malaria Strategic Plan			
Malaria activities targeting IDPs in Malaria Strategic Plan			
Zero Malaria Starts With Me Launched			
End Malaria Council and Fund Launched			
Resistance Monitoring, Implementation and Impact			
Drug efficacy studies conducted since 2019 and data reported to WHO			
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010		3	
Insecticide resistance monitored since 2015 and data reported to WHO			
% of vector control in the last year with next generation materials		100	
On track to reduce malaria incidence by at least 75% by 2025 (vs 2015)			
On track to reduce malaria mortality by at least 75% by 2025 (vs 2015)			
Tracer Indicators for Maternal and Child Health and NTDs			
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2022)		50	
% of Neglected Tropical Disease MDAs Achieving WHO Targets		25	
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2023)		18	
Vitamin A Coverage 2022 (2 doses)		6	
DPT3 coverage 2023 (vaccination among 0-11 month olds)		78	
Climate Change and VBDs in NDCs			

Key

The entire population of the Republic of the Congo is at high risk of malaria and transmission is intense all year round. The annual reported number of malaria cases in 2022 was 581,329 with 951 deaths.

Target achieved or on track Progress but more effort required Not on track No data Not applicable

Congo ALMA Quarterly Report Quarter Three, 2024

Malaria

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. We must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. AU Member States face a \$1.5 billion gap just to sustain existing, yet inadequate, levels of malaria-related services between now and 2026. To get back on track and eliminate malaria, we will need to mobilise another \$5.2 billion dollars annually to fully finance our national malaria plans. Climate change presents a significant threat to the progress that we have made. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Climate disasters displace millions and destroy roads and health facilities, reducing access to health services. There is urgency to decarbonise and reduce our carbon footprint. We must implement integrated and multisectoral solutions, and adapt our health systems to the threats of both climate change and pandemics. We must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the Anopheles stephensi mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. The scaling up of these interventions will help us achieve our goal of eliminating malaria. This will require integrated approaches with malaria as a pathfinder for pandemic preparedness, climate change and health, Primary Health Care and Universal Health Coverage. We must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD councils and Funds, which have raised over US\$75 million.

Progress

Congo secured sufficient resources to cover the required needs for ACTs, RDTs and LLINs required in 2024-2026, but there remain significant gaps to fully implement the national strategic plan. The country has recently reported the results of insecticide resistance monitoring and drug resistance and has reported the results to WHO.

In line with the priority agenda of the ALMA chair, His Excellency President Umaro Sissoco Embaló, Congo has enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Scorecard, however this scorecard has not yet been shared through the ALMA Scorecard Hub. The NTD country scorecard has been shared through the Scorecard Hub. The country should consider establishing an End Malaria Council and Fund to enhance domestic resource mobilization and multi-sectoral action.

Impact

The annual reported number of malaria cases in 2022 was 581,329 with 951 deaths.

Key Challenge

• Lack of resources to fully implement the national strategic plan.

Previous Key Recommended Actions

Congo has responded positively to the recommended action addressing malaria incidence and inclusion of refugees in the national strategic plan and continues to track progress as these actions are implemented

Reproductive, Maternal, Newborn, Adolescent and Child Health

Progress

The country has enhanced the tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard.

Previous Key Recommended Actions

Congo has responded positively to the RMNCAH recommended action addressing low coverage of ARTs in children, with a recent increase of 3% coverage, and vitamin A and continues to track progress as these actions are implemented.

Neglected Tropical Diseases

Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in Congo is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis and soil transmitted helminths. Preventive chemotherapy coverage in Congo is low for schistosomiasis (34%), soil transmitted helminths (45%) and for lymphatic filariasis (55%). It is good for onchocerciasis (72%). Overall, the NTD preventive chemotherapy coverage index for Congo in 2022 is 50 and this represents an increase compared with the 2021 index value (48). The country did not reach any WHO MDA coverage target in 2022. The country has included Vector-borne diseases in their Nationally Determined Contributions.
