Malawi ALMA Quarterly Report Quarter Three, 2024

Scorecard for Accountability and Action

Metrics

Financing				
LLIN financing (2024-2026) projection (% of need)		100		
Public sector ACTs and RTDs financing (2024-2026) projection (% of need)		100		
% of National Malaria Strategic Plan Financed (2024- 2026)		44		
Policy				
Signed, ratified and deposited the AMA instrument at the AUC				
Malaria activities targeting refugees in Malaria Strategic Plan				
Malaria activities targeting IDPs in Malaria Strategic Plan				
Zero Malaria Starts With Me Launched				
End Malaria Council and Fund Launched				
Resistance Monitoring, Implementation and Impact				
Drug efficacy studies conducted since 2019 and data reported to WHO				
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010		3		
Insecticide resistance monitored since 2015 and data reported to WHO				
% of vector control in the last year with next generation materials		100		
On track to reduce malaria incidence by at least 75% by 2025 (vs 2015)				
On track to reduce malaria mortality by at least 75% by 2025 (vs 2015)				
Tracer Indicators for Maternal and Child Health and NTDs	5			
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2022)		51		
% of Neglected Tropical Disease MDAs Achieving WHO Targets		60		
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2023)		72		
Vitamin A Coverage 2022 (2 doses)		11		
DPT3 coverage 2023 (vaccination among 0-11 month olds)		91		
Climate Change and VBDs in NDCs				

Malaria is endemic in all parts of Malawi. The annual reported number of malaria cases in 2022 was 4,251,068 with 1,829 deaths.

Malaria

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. We must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. AU Member States face a \$1.5 billion gap just to sustain existing, yet inadequate, levels of malaria-related services between now and 2026. To get back on track and eliminate malaria, we will need to mobilise another \$5.2 billion dollars annually to fully finance our national malaria plans. Climate change presents a significant threat to the progress that we have made. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Climate disasters displace millions and destroy roads and health facilities, reducing access to health services. There is urgency to decarbonise and reduce our carbon footprint. We must implement integrated and multisectoral solutions, and adapt our health systems to the threats of both climate change and pandemics. We must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the Anopheles stephensi mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. The scaling up of these interventions will help us achieve our goal of eliminating malaria. This will require integrated approaches with malaria as a pathfinder for pandemic preparedness, climate change and health, Primary Health Care and Universal Health Coverage. We must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD councils and Funds, which have raised over US\$75 million.

Progress

Malawi has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. The country has also developed an insecticide resistance monitoring and management plan and in response to the insecticide resistance status has rolled out next generation mosquito nets and insecticides. Malawi has launched the Zero Malaria Starts with Me campaign. The country has secured sufficient resources to cover the priority ACT, RDT and LLIN requirements for 2024-2026.

In line with the priority agenda of the ALMA chair, His Excellency President Umaro Sissoco Embaló, Malawi has significantly enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Control Scorecard and is planning to post the scorecard to the ALMA Scorecard Hub. The NTD scorecard has already been posted to the Scorecard Hub. The country should consider establishing an End Malaria Council and Fund to enhance domestic resource mobilization and multi-sectoral action.

Impact

The annual reported number of malaria cases in 2022 was 4,251,068 with 1,829 deaths.

Key Challenge

• Resource gaps to fully implement the malaria national strategic plan.

Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Policy	Sign, ratify and deposit the AMA instrument at the AUC	Q1 2023		No progress reported

Reproductive, Maternal, Newborn, Adolescent and Child Health

Progress

Malawi has enhanced the tracking and accountability mechanisms with the development and launch of the Reproductive, Maternal, Newborn and Child Health Scorecard.

Previous Key Recommended Action

The country has responded to the recommended action on low coverage of vitamin A and is working to address this challenge.

Neglected Tropical Diseases

Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in Malawi is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. In 2022, preventive chemotherapy coverage was 100% for both lymphatic filariasis and trachoma (as both are eliminated), 82% for onchocerciasis, 30% for schistosomiasis and 14% for soil-transmitted helminthiasis. Overall, the NTD preventive chemotherapy coverage index for Malawi in 2022 is 51, which represents a substantial decrease compared with the 2021 index value (59). The country reached WHO MDA coverage for onchocerciasis only. Malawi has signed the Kigali declaration. Malawi has significantly enhanced the tracking and accountability mechanisms for NTDs with the development of a NTD Scorecard tool. The country has included Vector-borne diseases in their Nationally Determined Contributions.

Previous Key Recommended Action

The country has responded positively to the recommended action on work to increase preventive chemotherapy coverages for schistosomiasis and soil transmitted helminthiasis.
