Cameroon ALMA Quarterly Report Quarter Four, 2024

Scorecard for Accountability and Action

Malaria transmission occurs year-round in Cameroon and is most intense in the south of the country. The annual reported number of malaria cases in 2023 was 3,015,821 with 1,756 deaths.

Key

Cameroon ALMA Quarterly Report Quarter Four, 2024

Malaria

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. We must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. AU Member States face a \$1.5 billion gap just to sustain existing, yet inadequate, levels of malaria-related services between now and 2026. To get back on track and eliminate malaria, we will need to mobilise another \$5.2 billion dollars annually to fully finance our national malaria plans. Climate change presents a significant threat to the progress that we have made. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Climate disasters displace millions and destroy roads and health facilities, reducing access to health services. There is urgency to decarbonise and reduce our carbon footprint. We must implement integrated and multisectoral solutions, and adapt our health systems to the threats of both climate change and pandemics. We must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the Anopheles stephensi mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. The scaling up of these interventions will help us achieve our goal of eliminating malaria. This will require integrated approaches with malaria as a pathfinder for pandemic preparedness, climate change and health, Primary Health Care and Universal Health Coverage. We must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD councils and Funds, which have raised over US\$125 million.

Progress

Cameroon secured the resources to cover the costs of the ACTs, RDTs and LLINs needed in 2024-2026 but still has only 58% of the national strategic plan financed. Cameroon has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO and has completed the insecticide resistance monitoring and management plan. In response to the identified insecticide resistance, the country has rolled out next generation mosquito nets. The national strategic plan includes activities targeting refugees and IDPs. Cameroon has launched the Zero Malaria Starts with me campaign. The country is also showing leadership in malaria control through participation in the High Burden High Impact approach, and signed the Yaoundé Declaration.

In line with the priority agenda of the ALMA chair, His Excellency President Umaro Sissoco Embaló, Cameroon has enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Control Scorecard. The country is also planning the launch of their End Malaria Council and Fund. The country has launched their ALMA youth corps.

Impact

The annual reported number of malaria cases in 2023 was 3,015,821 with 1,756 deaths.

Key Challenges

- Insecticide resistance.
- Insufficient resources to fully implement the national strategic plan

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Resource Mobilisation	Work to fill key gaps in malaria funding	Q2 2024		The country established a national committee and following national dialogue is developing a national road map to ensure that the key elements of the Yaoundé declaration are met, including resource mobilization. The country is planning the establishment of the End Malaria Council.
Impact	Work to develop a plan of action to support the implementation of the Yaoundé declaration	Q4 2024		In order to address the Yaoundé declaration, the country organized briefing meetings of civil society and a special high level malaria meeting at the Parliament including briefs to both Members of Parliament and the media on the Yaoundé declaration. Cameroun also established a national committee to organize a national malaria dialogue and from this national dialogue, the country is now developing a national road map.

The country has responded positively to previous recommended action on drug resistance monitoring and is working to implement the actions.

Reproductive, Maternal, Newborn, Adolescent and Child Health

Progress

Cameroon has achieved good coverage in the tracer RMNCAH intervention, Vitamin A.

Previous Key Recommended Action

The country has responded positively to previous recommended action on accelerating coverage of ARTs in children under 14 years of age and continues to monitor progress.

Neglected Tropical Diseases Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in Cameroon is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Cameroon is very good for lymphatic filariasis (100%), for schistosomiasis (88%), for onchocerciasis (80%). It is low for trachoma (41%) and for soil transmitted helminthiasis (59%). Overall, the NTD preventive chemotherapy coverage index for Cameroon in 2023 is 70 and this represents a decrease compared with the 2022 index value (71). The country reached WHO MDA coverage targets for schistosomiasis and onchocerciasis.

Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Climate Change and health	Work to collate data on the impact of climate change on Vector Borne disease and incorporate into the next round on National Determined Contributions and National Climate Change Action Plans	Q4 2025		Deliverable not yet due

New Key Recommended Action

Objective	Action Item	Suggested completion timeframe
NTDs	Submit data to the AUC on the national Budget Allocated to NTDs	Q4 2025
