

South Sudan ALMA Quarterly Report Quarter Four, 2024

Scorecard for Accountability and Action

Metrics

Financing		
LLIN financing (2024-2026) projection (% of need)	26	Not on track
Public sector ACTs and RTDs financing (2024-2026) projection (% of need)	100	Target achieved or on track
% of National Malaria Strategic Plan Financed (2024-2026)	40	Progress but more effort required
Policy		
Signed, ratified and deposited the AMA instrument at the AUC		Not on track
Malaria activities targeting refugees in Malaria Strategic Plan		Target achieved or on track
Malaria activities targeting IDPs in Malaria Strategic Plan		Target achieved or on track
Zero Malaria Starts With Me Launched		Target achieved or on track
End Malaria Council and Fund Launched		No data
Resistance Monitoring, Implementation and Impact		
Drug efficacy studies conducted since 2019 and data reported to WHO		Not on track
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	0	Target achieved or on track
Insecticide resistance monitored since 2015 and data reported to WHO		Not on track
% of vector control in the last year with next generation materials	57	Progress but more effort required
On track to reduce malaria incidence by at least 75% by 2025 (vs 2015)		Progress but more effort required
On track to reduce malaria mortality by at least 75% by 2025 (vs 2015)		Progress but more effort required
Tracer Indicators for Maternal and Child Health and NTDs		
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2023)	38	Progress but more effort required
% of Neglected Tropical Disease MDAs Achieving WHO Targets	0	Not on track
National Budget Allocated to NTDs		Not on track
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2023)	28	Not on track
Vitamin A Coverage 2022 (2 doses)	89	Target achieved or on track
DPT3 coverage 2023 (vaccination among 0-11 month olds)	73	Progress but more effort required
Climate Change and VBDs in NDCs		Target achieved or on track

Key

Target achieved or on track
Progress but more effort required

No data
Not applicable

Malaria transmission in South Sudan is generally perennial, with moderate to high intensity. The annual reported number of malaria cases in 2023 was 5,089,688 and 1,813 deaths

Malaria

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. We must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. AU Member States face a \$1.5 billion gap just to sustain existing, yet inadequate, levels of malaria-related services between now and 2026. To get back on track and eliminate malaria, we will need to mobilise another \$5.2 billion dollars annually to fully finance our national malaria plans. Climate change presents a significant threat to the progress that we have made. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Climate disasters displace millions and destroy roads and health facilities, reducing access to health services. There is urgency to decarbonise and reduce our carbon footprint. We must implement integrated and multisectoral solutions, and adapt our health systems to the threats of both climate change and pandemics. We must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the *Anopheles stephensi* mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. The scaling up of these interventions will help us achieve our goal of eliminating malaria. This will require integrated approaches with malaria as a pathfinder for pandemic preparedness, climate change and health, Primary Health Care and Universal Health Coverage. We must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD councils and Funds, which have raised over US\$125 million.

Progress

South Sudan secured the resources needed to achieve universal coverage of RDTs in 2024-2026 but has significant gaps in LLINs and in fully financing the national strategic plan. South Sudan has completed the insecticide resistance monitoring and management plan. The country has also recently launched the Zero Malaria Starts with Me campaign. The country is working on their End Malaria Council and Fund to enhance domestic resource mobilization and multi-sectoral action. South Sudan has launched their ALMA youth corps.

Impact

The annual reported number of malaria cases in 2023 was 5,089,688 and 1,813 deaths.

Key Challenge

- Insufficient resources to fully implement the malaria national strategic plan.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Policy	Sign, ratify and deposit the AMA instrument at the AUC	Q1 2023		No progress reported

South Sudan has responded positively to the recommended action on drug and insecticide resistance monitoring and continues to track progress as these actions are implemented.

Reproductive, Maternal, Newborn, Adolescent and Child Health

Progress

South Sudan has achieved high coverage of the tracer RMNCAH indicator, vitamin A.

Previous Key Recommended Actions

South Sudan has responded positively to the recommended actions addressing low coverage of ARTs in children, with a 7% increase in coverage recorded over the last year, and continues to track progress as these actions are implemented.

Neglected Tropical Diseases

Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in South Sudan is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. In 2023, preventive chemotherapy coverage was 57% for onchocerciasis, 52% for lymphatic filariasis, 56% for soil transmitted helminthiasis, 26% for trachoma and 18% for schistosomiasis. Overall, the NTD preventive chemotherapy coverage index for South Sudan in 2023 is 38 which represents a substantial increase compared with the 2022 index value (15). The country did not reach any WHO MDA target in 2023. South Sudan has included Vector-borne diseases in the country Nationally Determined Contributions.

New Key Recommended Action

Objective	Action Item	Suggested completion timeframe
NTDs	Submit data to the AUC on the national Budget Allocated to NTDs	Q4 2025

Key

	Action achieved
	Some progress
	No progress
