

Scorecard for Accountability and Action

Malaria is endemic in all parts of Zambia and transmission is seasonal. The annual reported number of malaria cases in 2022 was 8,318,534 with 1361 deaths.

Metrics

Financing		
LLIN financing (2024-2026) projection (% of need)		69
Public sector ACTs and RTDs financing (2024-2026) projection (% of need)		100
% of National Malaria Strategic Plan Financed (2024-2026)		80
Policy		
Signed, ratified and deposited the AMA instrument at the AUC	▲	
Malaria activities targeting refugees in Malaria Strategic Plan		
Malaria activities targeting IDPs in Malaria Strategic Plan		
Zero Malaria Starts With Me Launched		
End Malaria Council and Fund Launched		
Resistance Monitoring, Implementation and Impact		
Drug efficacy studies conducted since 2019 and data reported to WHO		
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010		4
Insecticide resistance monitored since 2015 and data reported to WHO		
% of vector control in the last year with next generation materials		100
On track to reduce malaria incidence by at least 75% by 2025 (vs 2015)		
On track to reduce malaria mortality by at least 75% by 2025 (vs 2015)		
Tracer Indicators for Maternal and Child Health and NTDs		
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2023)		8
% of Neglected Tropical Disease MDAs Achieving WHO Targets		20
National Budget Allocated to NTDs		
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2023)		71
Vitamin A Coverage 2022 (2 doses)		97
DPT3 coverage 2023 (vaccination among 0-11 month olds)		80
Climate Change and VBDs in NDCs

Malaria

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. We must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. AU Member States face a \$1.5 billion gap just to sustain existing, yet inadequate, levels of malaria-related services between now and 2026. To get back on track and eliminate malaria, we will need to mobilise another \$5.2 billion dollars annually to fully finance our national malaria plans. Climate change presents a significant threat to the progress that we have made. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Climate disasters displace millions and destroy roads and health facilities, reducing access to health services. There is urgency to decarbonise and reduce our carbon footprint. We must implement integrated and multisectoral solutions, and adapt our health systems to the threats of both climate change and pandemics. We must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the *Anopheles stephensi* mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. The scaling up of these interventions will help us achieve our goal of eliminating malaria. This will require integrated approaches with malaria as a pathfinder for pandemic preparedness, climate change and health, Primary Health Care and Universal Health Coverage. We must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD councils and Funds, which have raised over US\$125 million.

Progress

Zambia has secured the required financing to fund the ACTs and RDTs required for 2024-26, including with significant domestic resource commitments but has significant LLIN gaps. Zambia has carried out insecticide resistance monitoring since 2015 and reported the results to WHO and in response to high levels of resistance has rolled out next generation nets and insecticides. Zambia has launched the Malaria Ends with Me campaign.

In line with the priority agenda of the ALMA chair, His Excellency President Umaro Sissoco Embaló, Zambia has enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Control and Elimination Scorecard and the sharing of the country scorecards through the ALMA Scorecard Hub. The country has also launched the multisectoral high level End Malaria Council and Malaria Fund and the Zambia youth corps.

Impact

The annual reported number of malaria cases in 2022 was 8,318,534 with 1361 deaths.

Key Challenges

- The country has documented mosquito resistance to four insecticide classes.
- Suspected artemisinin partial resistance.
- There is a need to strengthen cross border collaboration with neighbouring countries.
- The country has significant resource gaps.

Previous Key Recommended Actions

Zambia has responded to the previous recommended action on drug resistance monitoring and continues to track progress as the identified actions are implemented.

Reproductive, Maternal, Newborn, Adolescent and Child Health

Progress

Zambia has achieved high coverage in the tracer RMNCAH intervention of vitamin A. The country has also increased coverage of ARTs in children. Zambia has enhanced accountability mechanisms with the development of a Reproductive, Maternal, Newborn and Child Health Scorecard.

Neglected Tropical Diseases

Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in Zambia is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, schistosomiasis, soil transmitted helminths and trachoma. In 2023, preventive chemotherapy coverage was 66% for schistosomiasis, 5% for Soil transmitted helminthiasis, 0% for trachoma and 100% for lymphatic filariasis. Overall, the NTD preventive chemotherapy coverage index in 2023 is 8 which represent an increase compared to the 2022 index value (3). The country reached the WHO MDA coverage target only for lymphatic filariasis.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Climate Change and health	Work to collate data on the impact of climate change on Vector Borne disease and incorporate into the next round on National Determined Contributions and National Climate Change Action Plans	Q4 2025		Deliverable not yet due

New Key Recommended Actions

Objective	Action Item	Suggested completion timeframe
NTDs	lymphatic filariasis, schistosomiasis, soil transmitted helminths and trachoma and reach WHO targets	Q4 2025
NTDs	Submit data to the AUC on the national Budget Allocated to NTDs	Q4 2025

Key

	Action achieved
	Some progress
