

Niger ALMA Quarterly Report Quarter One, 2025

Scorecard for Accountability and Action

Metrics

Financing		
LLIN financing (2024-2026) projection (% of need)	83	
Public sector ACTs and RTDs financing (2024-2026) projection (% of need)	96	
% of National Malaria Strategic Plan Financed (2024-2026)	50	
Domestic Financing for Malaria (2025)		
Policy		
Signed, ratified and deposited the AMA instrument at the AUC		
Malaria activities targeting refugees in Malaria Strategic Plan		
Malaria activities targeting IDPs in Malaria Strategic Plan		
Zero Malaria Starts With Me Launched		
End Malaria Council and Fund Launched		
Resistance Monitoring, Implementation and Impact		
Drug efficacy studies conducted since 2019 and data reported to WHO		
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	3	
Insecticide resistance monitored since 2020 and data reported to WHO		
% of vector control in the last year with next generation materials	28	
ACTs in stock (>6 months stock)		
RTDs in stock (>6 months stock)		
On track to reduce malaria incidence by at least 75% by 2025 (vs 2015)		
On track to reduce malaria mortality by at least 75% by 2025 (vs 2015)		
Tracer Indicators for Maternal and Child Health and NTDs		
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2023)	75	
% of Neglected Tropical Disease MDAs Achieving WHO Targets	75	
National Budget Allocated to NTDs		
Estimated % of children (0-14 years old) living with HIV who have access to antiretroviral therapy (2023)	41	
DPT3 coverage 2023 (vaccination among 0-11 month olds)	85	
Climate Change and VBDs in NDCs		

Malaria transmission is most intense in the south whilst the desert areas in the north are malaria-free. The annual reported number of malaria cases in 2023 was 4,486,983 with 4,633 deaths.

Malaria

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. We must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. To get back on track and eliminate malaria, we will need to mobilise another \$5.2 billion dollars annually to fully finance our national malaria plans, and urgently fill gaps created by the recent reductions in ODA. Extreme weather events and climate change present a significant threat to the progress that we have made. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Climate disasters displace millions and destroy roads and health facilities, reducing access to health services. We must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the invasive *Anopheles stephensi* mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. The scaling up of these interventions will help us achieve our goal of eliminating malaria. This will require integrated approaches with malaria as a pathfinder for primary health care strengthening, climate change and health, and Universal Health Coverage. We must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD councils and Funds, which have raised over US\$150 million.

Progress

The country has secured the majority of the resources required to deliver the required case management and ITNs for 2024-2026, although gaps in funding exist. Niger has completed the national insecticide resistance monitoring and management plan and has recently reported the results of insecticide resistance testing to WHO, and to address the increasing levels of insecticide resistance is rolling out next generation mosquito nets. The country is also showing leadership in malaria control through participation in the High Burden High Impact approach, and recently signed the Yaoundé Declaration. Niger has launched its Zero Malaria Starts with Me campaign.

In line with the priority agenda of the ALMA chair, President Advocate Duma Gideon Boko, the country has enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Control Scorecard, although the scorecard is not yet posted to the ALMA Scorecard Hub. The country is developing a concept note for the End Malaria Council.

Impact

The annual reported number of malaria cases in 2023 was 4,486,983 with 4,633 deaths.

Key Challenge

- Insufficient resources to achieve high coverage of essential malaria interventions, including with the recent reductions in ODA.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Resource Mobilisation	Work to fill key gaps in malaria funding	Q2 2024		With only around 50% of the national strategic plan financed over the next three years, additional resource mobilisation efforts are ongoing. Discussions are ongoing to identify opportunities for internal resources mobilisation with the collaboration of partners such as ALMA, including exploring the launch of an End Malaria Council. The country has signed the Yaoundé declaration which commits to increased domestic resources for the fight against malaria
Impact	Work to develop a plan of action to support the implementation of the Yaoundé declaration	Q4 2024		Following a joint orientation meeting by RBM, WHO and ALMA, Niger is working to outline the plan to develop their workplan to support the implementation of the Yaoundé declaration
Impact	Track the implications of the US Government actions related to PMI support and work to mitigate the impact	Q4 2025		The 2 PMI partners implementing malaria life saving activities on behalf of USPMI in Niger were not terminated. It is expected that PMI will support four rounds of SMC (from July to October) for approximately 1.7 million. The country has good stocks of ACTs and RDTs

Niger has responded positively to the recommended action addressing drug resistance monitoring as well as inclusion of refugees in the national strategic plan and continues to track progress as these action are implemented

Reproductive, Maternal, Newborn, Adolescent and Child Health

Progress

The country has enhanced tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard.

Previous Key Recommended Actions

Niger has responded positively to the RMNCAH recommended actions addressing low coverage of ARTs in children, and continues to track progress as actions are implemented.

Neglected Tropical Diseases

Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in Niger is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, schistosomiasis, soil transmitted helminths and trachoma. The country also submitted onchocerciasis elimination dossier to WHO and is waiting for the feedback. In 2023, preventive chemotherapy coverage was 100% for soil transmitted helminthiasis (under surveillance), 93% for schistosomiasis, 47% for trachoma and 72% for lymphatic

filariasis. Overall, the NTD preventive chemotherapy coverage index for Niger in 2023 is 75, which represents a substantial increase compared with the 2022 index value of 56. The country did not reach WHO MDA target for trachoma only in 2023. The country has created a budget line for NTDs.

Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Climate Change and health	Work to collate data on the impact of climate change on Vector Borne disease and incorporate into the next round on National Determined Contributions and National Climate Change Action Plans	Q4 2025		Deliverable not yet due
