Rwanda ALMA Quarterly Report Quarter Two, 2025

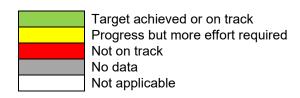

Scorecard for Accountability and Action

The annual reported number of malaria cases in 2023 was 549,326 with 35 deaths.

Key

Rwanda ALMA Quarterly Report Quarter Two, 2025

Malaria

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. Countries must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, decreasing ODA, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. To get back on track and eliminate malaria. US\$5.2 billion is needed annually to fully finance country national malaria plans, and urgently fill gaps created by the recent reductions in ODA. Extreme weather events and climate change present a significant threat. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Extreme weather events displace millions and destroy roads and health facilities, reducing access to health services. Countries must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the invasive Anopheles stephensi mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dualinsecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. Malaria can serve as a pathfinder for primary health care strengthening, climate change and health, and Universal Health Coverage. Countries must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD Councils and Funds, which have raised over US\$150 million to date.

Progress

Rwanda has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO and in response to the high levels of insecticide resistance has scaled up next generation mosquito nets and insecticides. Rwanda has carried out drug resistance testing since 2018 and has reported the results to WHO. The national strategic plan includes activities targeting refugees. The country has launched the Zero Malaria Starts with Me campaign. Rwanda has reduced malaria incidence by more than 40% since 2015.

In line with the priority agenda of the ALMA chair, President Advocate Duma Gideon Boko, Rwanda has enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Control Scorecard and posting this scorecard to the ALMA Scorecard Hub. The country is considering the launch of an End Malaria Council and Fund.

Impact

The annual reported number of malaria cases in 2023 was 549,326 with 35 deaths.

Key Challenges

- Gaps in financing to fully implement the national strategic plan, including with recent reductions in ODA
- Threat of drug and insecticide resistance.
- Increase in malaria cases

Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Impact	Track the implications of the US Government actions related to PMI support and work to mitigate the impact	Q4 2025		The country had an increase in malaria cases in 2023-2024 and the government provided domestic resources to cover direct programme needs including IRS, integrated vector control, malaria and NTDs case management and surveillance.

Reproductive, Maternal, Newborn, Adolescent and Child Health

Progress

Rwanda has achieved high coverage of tracer RMNCAH interventions, including DPT3 vaccination. The country has significantly enhanced the tracking and accountability mechanisms with the development of the Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard and has published the scorecard on the ALMA Scorecard Hub.

Neglected Tropical Diseases Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in Rwanda is measured using a composite index calculated from preventive chemotherapy coverage achieved for schistosomiasis, and soil transmitted helminths. In 2023, preventive chemotherapy coverage was 100% for soil-transmitted helminths and 89% for schistosomiasis. Overall, the NTD preventive chemotherapy coverage index for Rwanda in 2023 is 94, which represents a slight decrease compared with the 2022 index value of 96. The country reached all WHO MDA targets in 2022. The country has included Vector-borne diseases in the country Nationally Determined Contributions

Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
NTDs	Submit data to the AUC on the national Budget Allocated to NTDs	Q4 2025		The country has a budget line for NTDs and will submit data to AUC
