

Sierra Leone ALMA Quarterly Report Quarter Three 2025

Scorecard for Accountability and Action

Metrics

Policy

Signed, ratified and deposited the AMA instrument at the AUC		
Malaria activities targeting refugees in Malaria Strategic Plan		
Malaria activities targeting IDPs in Malaria Strategic Plan		
Zero Malaria Starts With Me Launched		
End Malaria Council and Fund Launched		

Resistance Monitoring, Implementation and Impact

Drug efficacy studies conducted since 2019 and data reported to WHO		
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010		5
Insecticide resistance monitored since 2020 and data reported to WHO		
% of vector control in the last year with next generation materials		
ACTs in stock (>6 months stock)		
RDTs in stock (>6 months stock)		
On track to reduce malaria incidence by at least 75% by 2025 (vs 2015)		
On track to reduce malaria mortality by at least 75% by 2025 (vs 2015)		

Tracer Indicators for Maternal and Child Health and NTDs

Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2023)		75
% of Neglected Tropical Disease MDAs Achieving WHO Targets		75
National Budget Allocated to NTDs		
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2024)		35
DPT3 coverage 2024 (vaccination among 0-11 month olds)		91
Climate Change and VBDs in NDCs

The entire population of Sierra Leone is at high risk of malaria. The annual reported number of malaria cases in 2023 was 2,148,650 with 2,637 deaths.

Malaria

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. Countries must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, decreasing ODA, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. To get back on track and eliminate malaria, US\$5.2 billion is needed annually to fully finance country national malaria plans, and urgently fill gaps created by the recent reductions in ODA. Extreme weather events and climate change present a significant threat. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Extreme weather events displace millions and destroy roads and health facilities, reducing access to health services. Countries must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the invasive *Anopheles stephensi* mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. Malaria can serve as a pathfinder for primary health care strengthening, climate change and health, and Universal Health Coverage. Countries must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD Councils and Funds, which have raised over US\$181 million to date.

A recent report by ALMA and MNM UK, “The Price of Retreat,” highlights the expected impact of malaria between 2025-2030 on GDP, trade and key sectors for development in Africa. If Sierra Leone cannot sustain malaria prevention due to reductions in malaria financing, this would lead to an estimated 3,404,031 additional cases, 3,268 more deaths, and GDP loss of US\$598 million between 2025 and 2030. However, if we mobilise the necessary resources and achieve a 90% reduction in malaria, in Sierra Leone there will be a US\$2.1 billion increase in GDP

Progress

Sierra Leone has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO and in response to the identified insecticide resistance has scaled up next generation mosquito nets. Sierra Leone has launched the Zero Malaria Starts with Me campaign.

In line with the priority agenda of the ALMA chair, President Advocate Duma Gideon Boko, Sierra Leone has significantly enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control and Elimination Scorecard, although the scorecard has not yet been posted to the ALMA Scorecard Hub. The country should consider establishing an End Malaria Council and Fund to enhance domestic resource mobilization and multi-sectoral action.

Impact

The annual reported number of malaria cases in 2023 was 2,148,650 with 2,637 deaths.

Key Challenge

- Insufficient resources available to fully implement the malaria national strategic plan, including with the impact of the recent ODA reductions.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Impact	Track the implications of the US Government actions related to PMI support and work to mitigate the impact	Q4 2025		Four partners remain actively engaged in supporting USG supported ITN distribution, malaria commodity procurement, malaria vaccination, and community-level diagnosis and treatment, as these activities are considered lifesaving. The majority of the originally planned commodities have been delivered or are in process

The country has responded previously to the recommended action on drug resistance monitoring and continues to track progress as actions are implemented.

Reproductive, Maternal, Newborn, Adolescent and Child Health

Progress

Sierra Leone has achieved high coverage of the tracer RMNCAH intervention of DPT3. The country enhanced the tracking and accountability mechanisms with the development of the Reproductive, Maternal, Newborn and Child Health Scorecard.

Previous Key Recommended Actions

Sierra Leone has responded positively to the RMNCAH recommended action addressing low coverage of ARTs in children and continues to track progress as this action is implemented, with increases in coverage recently observed.

Neglected Tropical Diseases

Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in Sierra Leone is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, and soil transmitted helminths. In 2023, preventive chemotherapy coverage was 77% for onchocerciasis, 75% for lymphatic filariasis, 67% for soil transmitted helminths and 81% for schistosomiasis. Overall, the NTD preventive chemotherapy coverage index for Sierra Leone in 2023 is 75. The country didn't reach WHO MDA targets for soil transmitted helminthiasis only in 2023. Sierra Leone has created a budget line for NTDs.

Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Climate Change and health	Work to collate data on the impact of climate change on Vector Borne disease and incorporate into the next round on National Determined Contributions and National Climate Change Action Plans	Q4 2025		Deliverable not yet due
