

### Scorecard for Accountability and Action

The entire population of Equatorial Guinea is at high risk of malaria and the transmission is intense all year round. The annual reported number of malaria cases in 2024 was 66,929 and 79 deaths.

#### Metrics

##### Policy

Signed, ratified and deposited the AMA instrument at the AUC			
Malaria activities targeting refugees in Malaria Strategic Plan			
Malaria activities targeting IDPs in Malaria Strategic Plan			
Zero Malaria Starts With Me Launched			
End Malaria Council and Fund Launched			

##### Resistance Monitoring, Implementation and Impact

Drug efficacy studies conducted since 2019 and data reported to WHO			
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010			2
Insecticide resistance monitored since 2020 and data reported to WHO			
% of vector control in the last year with next generation materials			100
ACTs in stock (>6 months stock)			
RDTs in stock (>6 months stock)			
On track to reduce malaria incidence by at least 75% by 2025 (vs 2015)			
On track to reduce malaria mortality by at least 75% by 2025 (vs 2015)			

##### Tracer Indicators for Maternal and Child Health and NTDs

Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2024)			1
% of Neglected Tropical Disease MDAs Achieving WHO Targets			25
National Budget Allocated to NTDs			
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2024)			
DPT3 coverage 2024 (vaccination among 0-11 month olds)			68
Climate Change and VBDs in NDCs

<span style="background-color: #FFFF00; border: 1px solid black; display: inline-block; width: 20px; height: 10px;"></span>	Progress but more effort required
<span style="background-color: #FF0000; border: 1px solid black; display: inline-block; width: 20px; height: 10px;"></span>	Not on track
<span style="background-color: #A9A9A9; border: 1px solid black; display: inline-block; width: 20px; height: 10px;"></span>	No data
<span style="background-color: #FFFFFF; border: 1px solid black; display: inline-block; width: 20px; height: 10px;"></span>	Not applicable

## **Malaria - The Big Push towards 2030**

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. Countries must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, decreasing ODA, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. To get back on track and eliminate malaria, US\$5.2 billion is needed annually to fully finance country national malaria plans, and urgently fill gaps created by the recent reductions in ODA. Extreme weather events and climate change present a significant threat. By the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Countries must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the invasive *Anopheles stephensi* mosquito which spreads malaria in both urban and rural areas. The malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. WHO have also recently approved the use of Spatial Repellents. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. Malaria can serve as a pathfinder for primary health care strengthening, climate change and health, and Universal Health Coverage. Countries must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD Councils and Funds, which have raised over US\$218 million to date.

A recent report by ALMA and MNM UK, “The Price of Retreat,” highlights the expected impact of malaria between 2025-2030 on GDP, trade and key sectors for development in Africa. If Equatorial Guinea cannot sustain malaria prevention due to reductions in malaria financing, this would lead to an estimated 104,898 additional cases, 17 more deaths, and GDP loss of US\$67.2 million between 2025 and 2030. However, if we mobilise the necessary resources and achieve a 90% reduction in malaria, in Equatorial Guinea there will be a US\$856.7 million increase in GDP.

### **Progress**

Equatorial Guinea has made progress with malaria control on Bioko Island and is working to extend this success to the mainland. The Honourable Minister of Health has been appointed as an ALMA RBM Malaria champion.

### **Impact**

The annual reported number of malaria cases in 2024 was 66,929 and 79 deaths.

### **Key Challenge**

- Ensuring there are sufficient resources available to deliver the National Strategic Plan

### **Previous Key Recommended Actions**

Equatorial Guinea has responded positively to the recommended actions addressing drug and insecticide resistance testing and continues to track progress as these actions are implemented.

# Reproductive, Maternal, Newborn, Adolescent and Child Health

## Previous Key Recommended Action

Equatorial Guinea has responded positively to the RMNCAH recommended action addressing the lack of data on ARTs. The country continues to track progress as these actions are implemented.

## Neglected Tropical Diseases

### Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in Equatorial Guinea is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis and soil transmitted helminths. Preventive chemotherapy coverage is zero for schistosomiasis (0%); for lymphatic filariasis (0%) and for soil transmitted helminthiasis (0%) and it is 100% for onchocerciasis which is under surveillance. Overall, the NTD preventive chemotherapy coverage index for Equatorial Guinea in 2024 is 1, which represents a decrease compared with the 2023 index value (9). The country did not reach any WHO MDA coverage target in 2024.

### Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Climate Change and health	Work to collate data on the impact of climate change on Vector Borne disease and incorporate into the next round on National Determined Contributions and National Climate Change Action Plans	Q4 2025		Equatorial Guinea's formal evaluation process for its two climate plans (the Nationally Determined Contribution and activities under its National Adaptation Plan, or NAP) is tied to its required reporting under the United Nations Framework Convention on Climate Change (UNFCCC). The Biennial Update Report for Equatorial Guinea has not yet been submitted to the UNFCCC.
NTDs	Work to implement preventive chemotherapy for lymphatic filariasis, schistosomiasis, and soil transmitted helminths and reach WHO targets.	Q4 2026		Deliverable not yet due
NTDs	Submit data to the AUC on the national Budget Allocated to NTDs	Q4 2025		No progress reported
