

# Sudan ALMA Quarterly Report

## Quarter One, 2026

### Scorecard for Accountability and Action

Malaria transmission in Sudan is low-to-moderate and occasionally epidemic. The annual reported number of malaria cases in 2024 was 1,880,610 with 705 deaths.

#### Metrics

Policy	
Signed, ratified and deposited the AMA instrument at the AUC	Not on track
Malaria activities targeting refugees in Malaria Strategic Plan	Target achieved or on track
Malaria activities targeting IDPs in Malaria Strategic Plan	Target achieved or on track
Zero Malaria Starts With Me Launched	Not on track
End Malaria Council and Fund Launched	Target achieved or on track
Resistance Monitoring, Implementation and Impact	
Drug efficacy studies conducted since 2019 and data reported to WHO	Target achieved or on track
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	4
Insecticide resistance monitored since 2020 and data reported to WHO	Not on track
% of vector control in the last year with next generation materials	34
ACTs in stock (>6 months stock)	Not on track
RDTs in stock (>6 months stock)	Progress but more effort required
On track to reduce malaria incidence by at least 75% by 2025 (vs 2015)	Not on track
On track to reduce malaria mortality by at least 75% by 2025 (vs 2015)	Not on track
Tracer Indicators for Maternal and Child Health and NTDs	
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2024)	1
% of Neglected Tropical Disease MDAs Achieving WHO Targets	20
National Budget Allocated to NTDs	No data
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2024)	8
DPT3 coverage 2024 (vaccination among 0-11 month olds)	39
Climate Change and VBDs in NDCs	Target achieved or on track

#### Key

Target achieved or on track
Progress but more effort required

## **Malaria - The Big Push towards 2030**

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. Countries must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, decreasing ODA, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. To get back on track and eliminate malaria, US\$5.2 billion is needed annually to fully finance country national malaria plans, and urgently fill gaps created by the recent reductions in ODA. Extreme weather events and climate change present a significant threat. By the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Countries must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the invasive *Anopheles stephensi* mosquito which spreads malaria in both urban and rural areas. The malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. WHO have also recently approved the use of Spatial Repellents. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. Malaria can serve as a pathfinder for primary health care strengthening, climate change and health, and Universal Health Coverage. Countries must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD Councils and Funds, which have raised over US\$218 million to date.

A recent report by ALMA and MNM UK, “The Price of Retreat,” highlights the expected impact of malaria between 2025-2030 on GDP, trade and key sectors for development in Africa. If Sudan cannot sustain malaria prevention due to reductions in malaria financing, this would lead to an estimated 6,181,963 additional cases, 14,929 more deaths, and GDP loss of US\$648 billion between 2025 and 2030. However, if we mobilise the necessary resources and achieve a 90% reduction in malaria, in Sudan there will be a US\$2 billion increase in GDP.

### **Global Fund Allocation**

The Global Fund allocation for Sudan for Grant Cycle 8 is US\$139.3 million for HIV, tuberculosis, malaria, and health systems strengthening for 2027-2029. The malaria component has been allocated US\$107 million. The allocations to the individual disease components are not fixed, and can be adjusted at country level. Sudan is urged to ensure that resources are allocated to malaria control from the overall Global Fund country allocation, as well as from domestic resources, to sustain coverage as much as possible.

### **Progress**

Sudan has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO and has completed the insecticide resistance monitoring and management plan. Sudan has also carried out drug resistance testing since 2018 and the data have been reported to WHO. The country is also showing leadership in malaria control through participation in the High Burden High Impact approach, and recently signed the Yaoundé Declaration.

In line with the priority agenda of the ALMA chair, President Advocate Duma Gideon Boko, Sudan has enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control and Elimination Scorecard, although the scorecard is not yet shared on the ALMA Scorecard Hub. The country has established an End Malaria Council to enhance domestic resource mobilization and multi-sectoral action.

## Impact

The annual reported number of malaria cases in 2024 was 1,880,610 with 705 deaths.

## Key Challenges

- Insecticide resistance threatens vector control.
- Suspected artemisinin partial resistance
- Gaps in funding for IRS.
- Current insecurity is severely impacting malaria and health programming

## Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Policy	Sign, ratify and deposit the AMA instrument at the AUC	Q1 2023		No progress reported
Impact	Investigate and address the reasons for the increase in estimated malaria incidence and deaths since 2015, which means that the country is not on track to achieve the 2025 target of a 75% reduction in malaria incidence and mortality	Q4 2025		The country has been going through major economic and political turmoil, leaving a weak health system able to deliver basic health services - coupled with outbreaks of Other Vector-Borne Diseases (Dengue, chikungunya) which have complicated the diagnosis and treatment of malaria. Even with this background and in an attempt to be on track, the country successfully implemented the distribution of an LLIN mass campaign – in history. Sudan also introduced a malaria vaccine coupled with the scaling up of coverage of the intermittent preventive treatment in pregnancy. Moreover, intervention gaps still exist and the scaling up of spatial repellents – especially in the hard-to-reach areas as well as in IDPs is highly recommended. The country has been going through major economic and political turmoil, leaving a weak health system able to deliver basic health services - coupled with outbreaks of Other Vector-Borne Diseases (Dengue, chikungunya) which have complicated the diagnosis and treatment of malaria. Even with this background and in an attempt to be on track, the country successfully implemented the distribution of an LLIN mass campaign – in history. Sudan also introduced a malaria vaccine coupled with the scaling up of coverage of the intermittent preventive treatment in pregnancy. Moreover, intervention gaps still exist and the scaling up of spatial repellents – especially in the hard-to-reach areas as well as in IDPs is highly recommended.

# Reproductive, Maternal, Newborn, Adolescent and Child Health

## Progress

The country has enhanced tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard.

### Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Optimise quality of care	Address the falling coverage of ART coverage in children	Q2 2026		Deliverable not yet due

Sudan has responded positively to the RMNCAH recommended action addressing low coverage of vitamin A and continues to track progress as this action is implemented.

## Neglected Tropical Diseases

### Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in Sudan is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, trachoma, schistosomiasis and soil transmitted helminths. In 2024, preventive chemotherapy coverage was 0% for trachoma, 12% for lymphatic filariasis, 0% for onchocerciasis, 0% for schistosomiasis and 100% for soil transmitted helminths (under surveillance). Overall, the NTD preventive chemotherapy coverage index for Sudan in 2024 is 1 which represents a small increase compared with the 2023 index value (0). The country did not reach any WHO MDA target in 2024. Sudan has included Vector-borne diseases in the country Nationally Determined Contributions

### Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
NTDs	Work to implement preventive chemotherapy for lymphatic filariasis, onchocerciasis, trachoma, schistosomiasis and soil transmitted helminths and reach WHO targets	Q4 2025		The country organized Lymphatic Filariasis Mass Drug Administration (MDA) in Q4 2025 and is working on the report. Another round MDA for Lymphatic Filariasis integrated with Schistosomiasis MDA is being prepared, to be conducted in Q4 2026. Soil Transmitted Helminthiasis are under surveillance, and the country is planning the impact survey to adjust the interventions.
NTDs	Submit data to the AUC on the national Budget Allocated to NTDs	Q4 2025		Every year, the country allocates funds for NTDs. The report will be submitted to AUC in Q2 2026.
