

Mauritania ALMA Quarterly Report Quarter Two, 2026

Scorecard for Accountability and Action

Metrics

Policy

Signed, ratified and deposited the AMA instrument at the AUC		
Malaria activities targeting refugees in Malaria Strategic Plan		
Malaria activities targeting IDPs in Malaria Strategic Plan		
Zero Malaria Starts With Me Launched		
End Malaria Council and Fund Launched		

Resistance Monitoring, Implementation and Impact

Drug efficacy studies conducted since 2019 and data reported to WHO		
Insecticide resistance monitored since 2020 and data reported to WHO		
% of vector control in the last year with next generation materials		100
ACTs in stock (>6 months stock)		
RDTs in stock (>6 months stock)		
On track to reduce malaria incidence by at least 75% by 2025 (vs 2015)		
On track to reduce malaria mortality by at least 75% by 2025 (vs 2015)		

Tracer Indicators for Maternal and Child Health and NTDs

Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2024)		24
% of Neglected Tropical Disease MDAs Achieving WHO Targets		50
National Budget Allocated to NTDs		
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2025)		39
DPT3 coverage 2025 (vaccination among 0-11 month olds)		86
Climate Change and VBDs in NDCs		

In Mauritania, almost 15% of the population is at high risk and 75% is at low risk of malaria. The annual reported number of malaria cases in 2024 was 101,807.

Malaria - The Big Push towards 2030

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. Countries must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, decreasing ODA, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. To get back on track and eliminate malaria, US\$5.2 billion is needed annually to fully finance country national malaria plans, and urgently fill gaps created by the recent reductions in ODA. Extreme weather events and climate change present a significant threat. By the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Countries must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the invasive *Anopheles stephensi* mosquito which spreads malaria in both urban and rural areas. The malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. WHO have also recently approved the use of Spatial Repellents. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. Malaria can serve as a pathfinder for primary health care strengthening, climate change and health, and Universal Health Coverage. Countries must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD Councils and Funds, which have raised over US\$245 million to date.

A recent report by ALMA and MNM UK, “The Price of Retreat,” highlights the expected impact of malaria between 2025-2030 on GDP, trade and key sectors for development in Africa. If Mauritania cannot sustain malaria prevention due to reductions in malaria financing, this would lead to an estimated 152,581 additional cases, 443 more deaths, and GDP loss of US\$63.9 million between 2025 and 2030. However, if we mobilise the necessary resources and achieve a 90% reduction in malaria, in Mauritania there will be a US\$238 million increase in GDP.

Global Fund Allocation

The Global Fund allocation for Mauritania for Grant Cycle 8 is US\$15.6 million for HIV, tuberculosis, malaria, and health systems strengthening for 2027-2029. The malaria component has been allocated US\$9.8 million. The allocations to the individual disease components are not fixed, and can be adjusted at country level. Mauritania is urged to ensure that resources are allocated to malaria control from the overall Global Fund country allocation, as well as from domestic resources, to sustain coverage as much as possible.

Progress

Mauritania has launched its Zero Malaria Starts with Me campaign.

In line with the priority agenda of the ALMA chair, President Advocate Duma Gideon Boko, Mauritania has enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Scorecard, although the scorecard is not yet shared on the ALMA Scorecard Hub. The country should consider establishing an End Malaria Council and Fund to enhance domestic resource mobilization and multi-sectoral action.

Impact

The annual reported number of malaria cases in 2024 was 101,807.

Key Challenges

- The country has a less than 20% malaria case reporting rate by surveillance systems.

- Insufficient resources to fully implement the malaria National Strategic Plan.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Policy	Sign, ratify and deposit the AMA instrument at the AUC	Q1 2023		No progress reported

The country has responded to the recommended actions linked to drug and insecticide resistance testing and continues to track progress as actions are implemented.

Reproductive, Maternal, Newborn, Adolescent and Child Health

Previous Key Recommended Actions

Mauritania has responded positively to the RMNCAH recommended actions addressing low coverage of ARTs in children under 14 years of age, with a recent 4% increase in coverage and vitamin A coverage and continues to track progress as these actions are implemented.

Neglected Tropical Diseases

Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in Mauritania is measured using a composite index calculated from preventive chemotherapy coverage achieved for schistosomiasis only. In 2024, preventive chemotherapy coverage was 100% for trachoma (now eliminated) and 6% for schistosomiasis. Overall, the NTD preventive chemotherapy coverage index for Mauritania in 2024 is 24, which represents a substantial decrease compared with the 2023 index value (63). The country did not reach schistosomiasis WHO MDA target in 2024. Mauritania has included Vector-Borne Diseases in the Nationally Determined Contributions.

Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
NTDs	Submit data to the AUC on the national Budget Allocated to NTDs	Q4 2025		The country submitted data to the AUC and reported the lack of a budget line for NTDs. Resource mobilisation including through domestic resources is ongoing
