

South Africa ALMA Quarterly Report

Quarter Two, 2026

Scorecard for Accountability and Action

Malaria is present in the three northern provinces of South Africa bordering Mozambique and Eswatini. The annual reported number of malaria cases in 2024 was 4,639 with 10 deaths.

Metrics

Policy		
Signed, ratified and deposited the AMA instrument at the AUC		
Malaria activities targeting refugees in Malaria Strategic Plan		
Malaria activities targeting IDPs in Malaria Strategic Plan		
Zero Malaria Starts With Me Launched		
End Malaria Council and Fund Launched		
Resistance Monitoring, Implementation and Impact		
Drug efficacy studies conducted since 2019 and data reported to WHO		
Insecticide resistance monitored since 2020 and data reported to WHO		
% of vector control in the last year with next generation materials		
ACTs in stock (>6 months stock)		
RDTs in stock (>6 months stock)		
On track to reduce malaria incidence by at least 75% by 2025 (vs 2015)		
On track to reduce malaria mortality by at least 75% by 2025 (vs 2015)		
Tracer Indicators for Maternal and Child Health and NTDs		
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2024)		1
% of Neglected Tropical Disease MDAs Achieving WHO Targets		0
National Budget Allocated to NTDs		
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2025)		67
DPT3 coverage 2025 (vaccination among 0-11 month olds)		65
Climate Change and VBDs in NDCs

Malaria - The Big Push towards 2030

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. Countries must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, decreasing ODA, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. To get back on track and eliminate malaria, US\$5.2 billion is needed annually to fully finance country national malaria plans, and urgently fill gaps created by the recent reductions in ODA. Extreme weather events and climate change present a significant threat. By the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Countries must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the invasive *Anopheles stephensi* mosquito which spreads malaria in both urban and rural areas. The malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. WHO have also recently approved the use of Spatial Repellents. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. Malaria can serve as a pathfinder for primary health care strengthening, climate change and health, and Universal Health Coverage. Countries must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD Councils and Funds, which have raised over US\$245 million to date.

A recent report by ALMA and MNM UK, “The Price of Retreat,” highlights the expected impact of malaria between 2025-2030 on GDP, trade and key sectors for development in Africa. If South Africa cannot sustain malaria prevention due to reductions in malaria financing, this would lead to an estimated 12,165 additional cases, 97 more deaths, and GDP loss of US\$77 million between 2025 and 2030. However, if we mobilise the necessary resources and achieve a 90% reduction in malaria, in South Africa there will be a US\$10.8 million increase in GDP.

Progress

South Africa has sufficient financing to cover the malaria commodity needs for 2023-2026. The country has finalised the insecticide resistance monitoring and management plan and has reported insecticide resistance data to WHO. WHO has identified South Africa as being a country with the potential to eliminate local transmission of malaria by 2025 and the country has reduced malaria incidence and deaths by more than 40% since 2015 and is on track to achieve the 2025 targets.

In line with the priority agenda of the ALMA chair, President Advocate Duma Gideon Boko, South Africa has enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Elimination Scorecard, although it is not yet shared on the ALMA Scorecard Hub.

Impact

The annual reported number of malaria cases in 2024 was 4,639 with 10 deaths.

Key Challenges

- Risk of re-introduction of malaria from neighbouring countries.
- Heavy rainfall in southern Africa may lead to malaria upsurges in 2025
- There is a need to strengthen cross border collaboration with neighbouring countries.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Policy	Sign, ratify and deposit the AMA instrument at the AUC	Q1 2023		No Progress Reported

The country has responded positively to the recommended actions addressing reporting drug resistance monitoring.

Neglected Tropical Diseases

Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in South Africa is shown using a composite index calculated from preventive chemotherapy coverage achieved for schistosomiasis and soil transmitted helminthiasis. In 2024, preventive chemotherapy coverage is 0 % for soil transmitted helminthiasis and 15% for schistosomiasis. Overall, the NTD preventive chemotherapy coverage index for South Africa in 2024 is 1, which represent a very small increase compared to 2023 index value (0). The country did not reach any WHO MDA target in 2024. South Africa has included Vector-Borne Diseases in their Nationally Determined Contributions.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
NTDs	Work to implement preventive chemotherapy for soil transmitted helminths and schistosomiasis and reach WHO targets.	Q4 2026		The country is still working to mobilize resources to conduct a national mapping of Schistosomiasis and soil transmitted helminthiasis to adjust the strategies. Deworming activities are being conducted on regular basis for school age children under the supervision of the Ministry of Education. Routine NTD activities are integrated in the primary health care.
NTDs	Establish a Budget line for NTDs	Q4 2025		The country has no specific budget line for NTDs but NTD case management is integrated into primary health care
